Aspen along Glacier Creek

Rocky Mountain National Park

Rocky Mountain National Park was created January 26, 1915. Encompassing 414 square miles it contains 113 peaks above 10,000 feet in elevation, with Longs Peak the highest at 14,255 feet. A feature of the park is the marked differences found with the changing elevation. At lower levels in the foothills and mountain ecosystem, open stands of ponderosa pine and juniper grow on the slopes facing the sun. Higher still, forests of Englemann spruce and subalpine fir take over in the subalpine ecosystem. Openings in these cool, dark forests produce wildflower gardens of rare beauty and luxuriance where the blue Colorado columbine reigns. From the valleys to its mountaintops, Rocky Mountain National Park encompasses many worlds. We invite you to explore them.

Easy to Install:

Windows

- Start Microsoft Windows
- Insert CD
- If Windows CD auto-play is enabled, the installation menu will automatically launch. Follow the on-screen instructions. (It may take several seconds for the screen to first appear.)
- If the menu does not launch follow these directions:

- Choose Run from the Start menu
- Type d:\setup in the Run dialog and click OK. (Substitute correct CD-ROM drive letter for d:)
- Follow additional instructions on screen

Macintosh

- Insert CD
- Double-click on CD icon
- Double-click on Installer icon
- Follow additional instructions on screen

Windows System Requirements:

- 486 or higher IBM PC or compatible
- Windows 95, 98, NT, & higher
- 256 color display minimum
- 4 MB RAM minimum, 8 MB preferred
- 8 MB hard drive space

Macintosh System Requirements:

- Power Mac or 68030 processor & higher
- System 7.5.3 or higher
- 256 color display minimum
- 8 MB RAM minimum, 16 MB preferred
- 8 MB hard drive space
